Step 1

The Share Phase

- The seventh and last phase is the “Share” phase.
- In this phase you will be able to share the video you created.

Step 2

The Share Phase

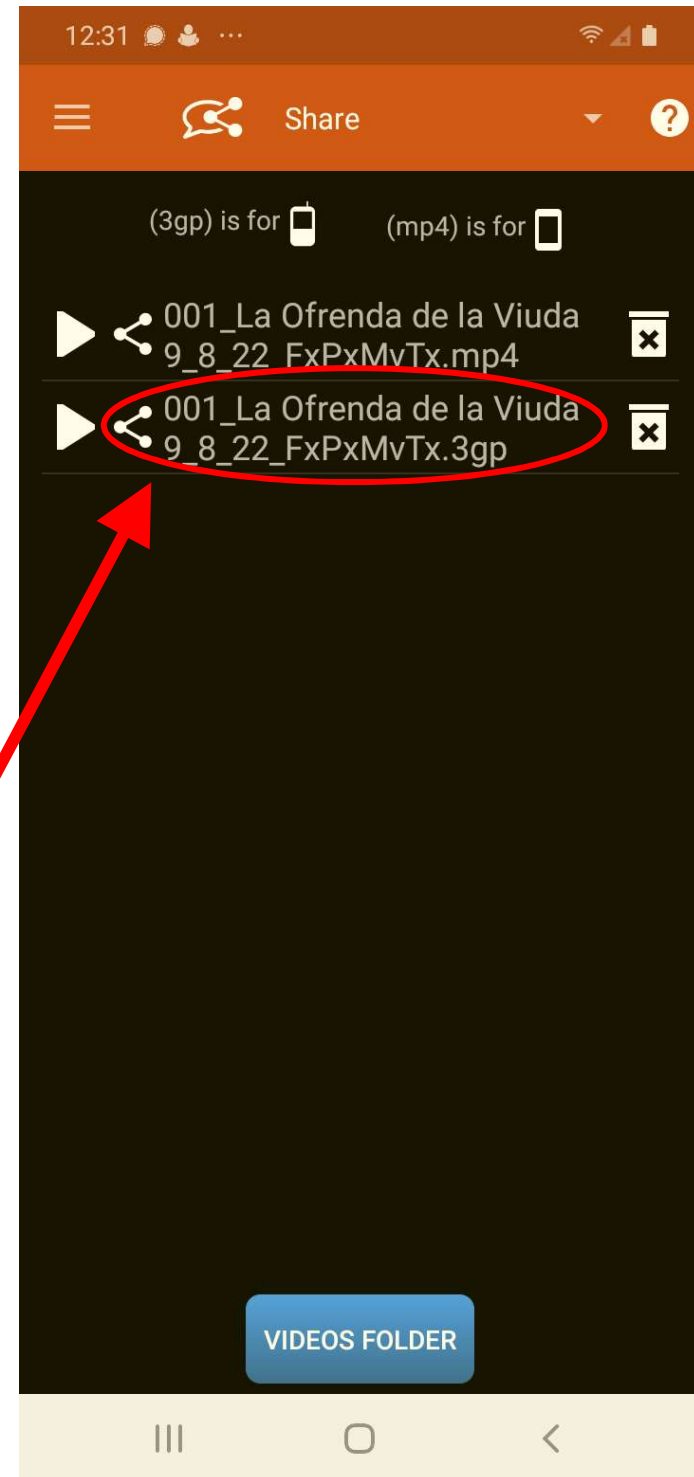

- You will see that the app produces the same video in two different file formats.
- One is an mp4, which is well suited for smartphones or the Internet.
- The other is a 3gp, which is a smaller file and lesser quality than the mp4, but is suited for feature phones.

Step 3

The Share Phase

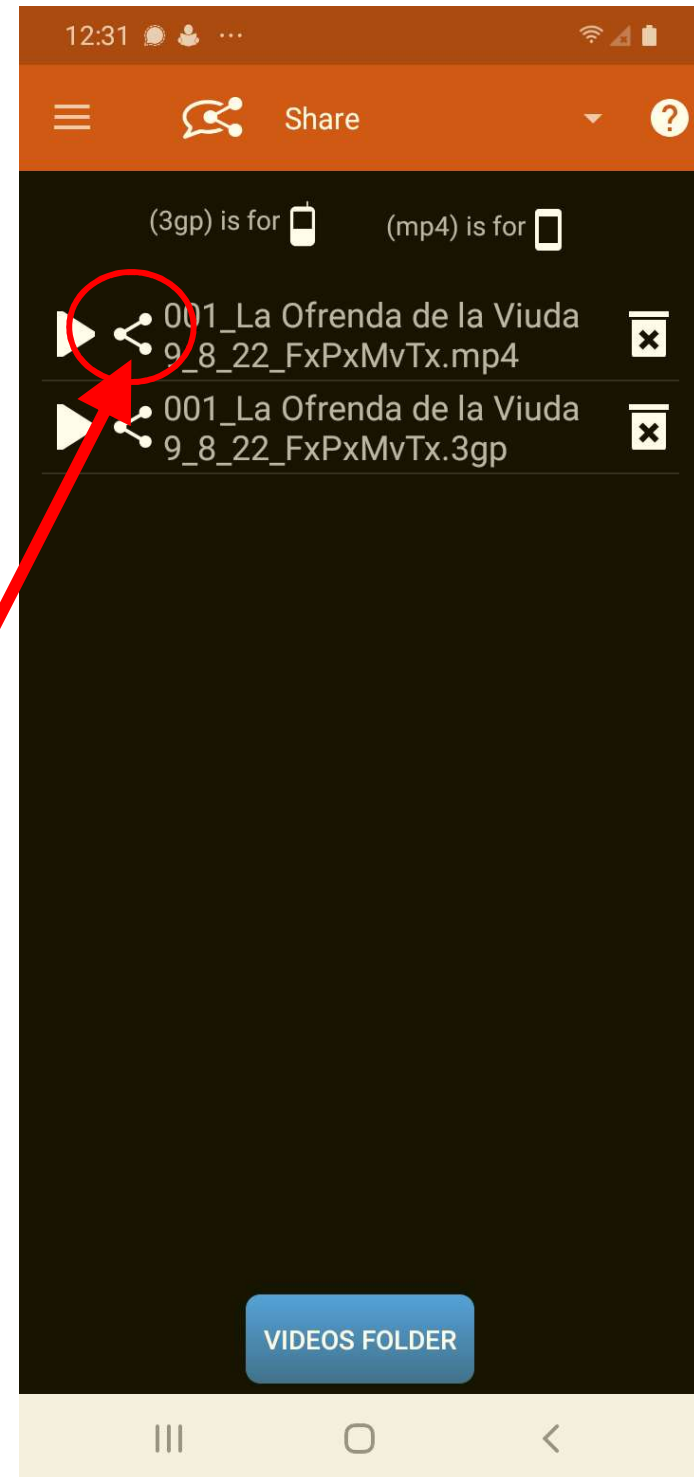

- You will also see each filename includes abbreviations for the options you opted to include when creating the video.
- For instance, this video has sound effects (“Fx”), pictures (“Px”), picture movement (“Mv”), and story text (“Tx”).

Step 4

The Share Phase

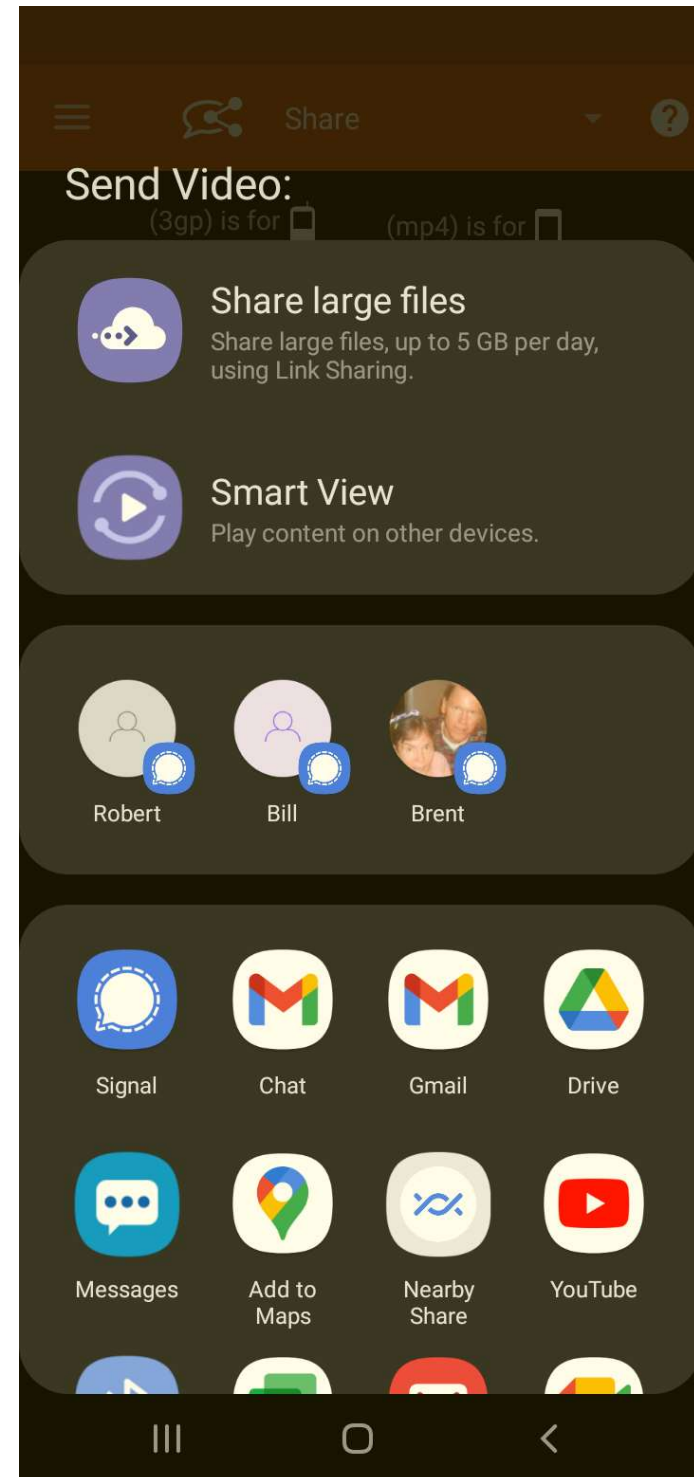

- On this screen you can choose to play your video or delete your video.
- Or you can tap the share icon, which consists of three connected dots.

Step 5

The Share Phase

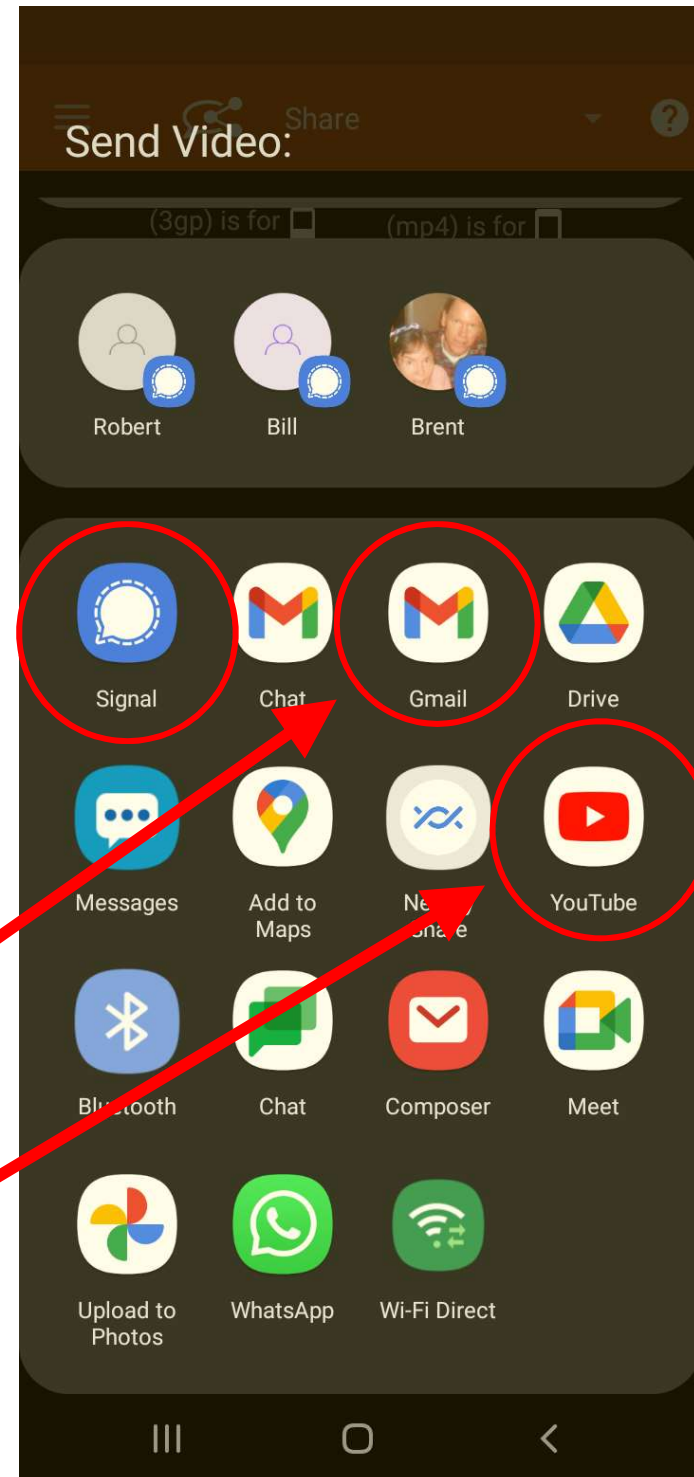

- Tapping the share icon reveals a variety of ways you can share your video directly from your phone.
- Scroll down to see all the sharing options available to you. Every device will be different, depending on the apps and services on the device.

Step 6

The Share Phase

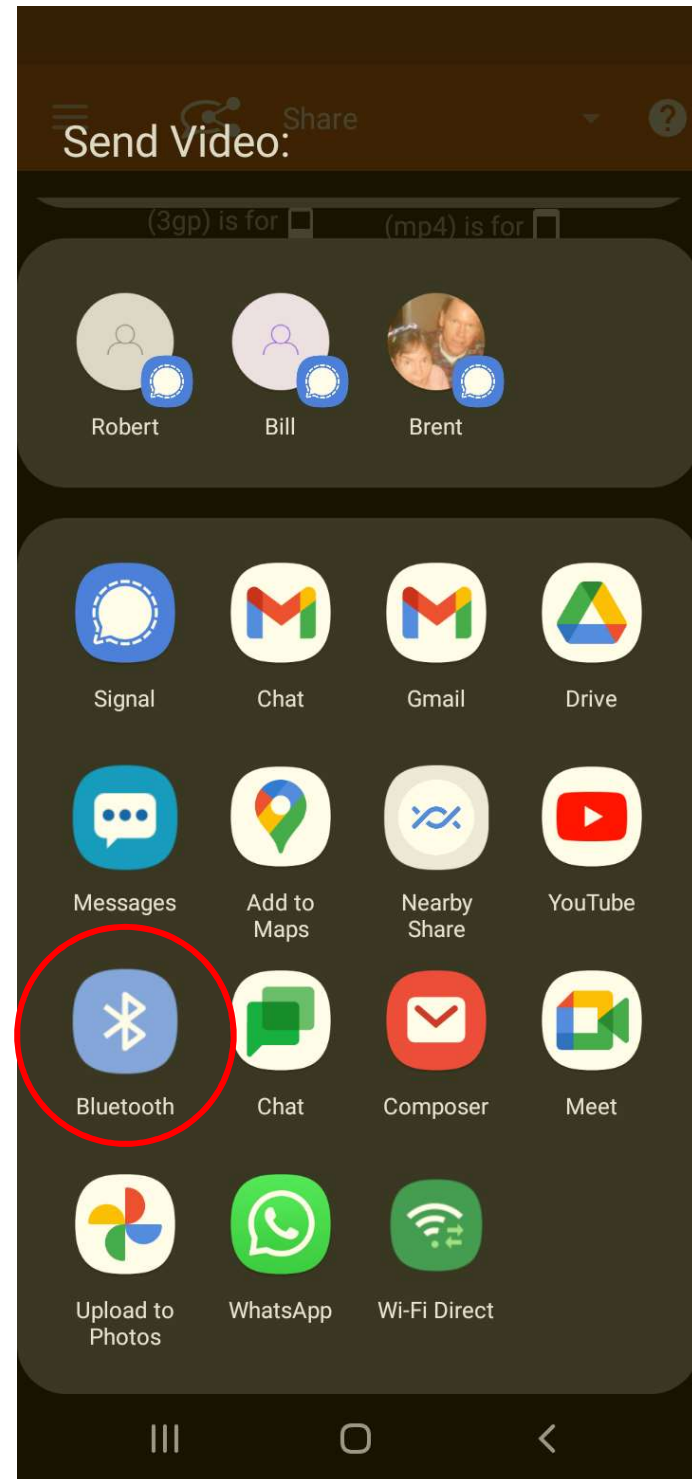

- For example, on my phone, I can share my video as a Signal message.
- I can send it as an email attachment.
- Or I can upload it to YouTube.

Step 7

The Share Phase

- If you have no Internet or cell service, you can still share your video with others in your immediate vicinity via Bluetooth.

Step 8

The Share Phase

- If you ever need to know where on the phone your video files have been stored, simply tap the “VIDEOS FOLDER” button.
